

M NOMAN ZAFAR

QA Engineer | Manual Testing | API Testing | Automation (Postman) | Database Validation

Lahore, Punjab, Pakistan | +92 312-933-9139 | mnumanzafar832@gmail.com | linkedin.com/in/m-noman-zafar-321209260 | github.com/nomanzafar1

PROFESSIONAL SUMMARY

QA Engineer with over a year of hands-on experience testing live client web and mobile applications, including a role at a digital services company alongside an industry-scale Final Year Project. Skilled in manual and API testing (Postman, including automated regression runs), PostgreSQL database validation, and structured defect tracking in Jira across the full bug life cycle. Growing focus on test automation, targeting QA Automation Engineer roles.

CORE SKILLS

- Testing Types: Manual, Functional, Integration, System, Regression, Performance, UI/UX, Validation, User Acceptance Testing (UAT)
- Test Design: Test case design, test execution, defect logging and tracking, edge case analysis, bug life cycle
- API Testing: REST API testing with Postman — request/response validation, authentication headers, error handling, status codes, automated collection runs for regression
- Databases: SQL, PostgreSQL (via Supabase), data integrity validation, CRUD verification
- Tools: Jira, Postman, Git, GitHub, Firebase Emulator Suite, Chrome DevTools, Android Studio
- Methodologies: Agile/Scrum, SDLC, STLC
- Programming: Python, JavaScript, Dart (Flutter), SQL

PROFESSIONAL EXPERIENCE

QA Engineer — Subrays

Jun 2025 – Present

Digital services company (Game Development, graphic design, digital marketing)

- Performed manual and API testing on three live client projects
- Identified, documented, and helped resolve bugs across categories including functional defects, UI/UX inconsistencies, input validation errors, performance bottlenecks, API failures, and database issues.
- Used Postman to build and run automated collection suites (~100 requests per run) for regression testing, cutting down repetitive manual API re-checks after each release.
- Logged, prioritized, and tracked defects in Jira through to resolution; verified fixes before sign-off.
- Worked within the release workflow of Developer → QA → QA Lead → Manager → CTO, reporting testing status directly to the QA Lead and, at times, the CTO.

QA Lead — Event Sphere (Final Year Project)

Flutter | Firebase | Supabase (PostgreSQL) | Postman | Firebase Emulator | Git | Jira

- Designed and executed 30+ structured test cases across Authentication, Event Management, QR Attendance, Notifications, and Admin Dashboard modules.
- Tested all Supabase (PostgreSQL) and Google Maps API endpoints with Postman, validating request/response formats, authentication headers, status codes, and error handling.
- Queried and validated PostgreSQL data via Supabase to confirm data integrity across CRUD operations and role-based access control.
- Used Firebase Emulator Suite to run offline unit and integration tests, isolating backend logic for repeatable, environment-independent results.
- Executed unit, integration, system, performance, and UAT testing across Agile sprint cycles; logged and tracked defects in Jira and verified fixes before each merge.
- Validated performance requirements: event registration under 2s (achieved 1.4s), QR scan under 3s (achieved 2.1s), 500 concurrent users with zero crashes, report generation under 10s (achieved 6.7s).
- Identified edge cases including low-light QR scan failures, duplicate check-in prevention, invalid QR rejection, and race-condition handling via Firestore atomic transactions.

OTHER PROJECT

Text Summarization Model — DistilBART Fine-Tuning

- Fine-tuned distilbart-cnn-12-6 on a custom dataset and evaluated output quality against ROUGE benchmarks — defining success criteria and measuring results against metrics, directly transferable to QA quality tracking.

EDUCATION

BS Computer Science — COMSATS University Islamabad, Sahiwal Campus

CGPA: 3.11 / 4.0

Relevant coursework: Software Engineering, Database Systems (SQL/PostgreSQL), Computer Networks, Mobile App Development, Machine Learning, Data Structures, OOP (C++, Java)

Certifications:

Increase SEO Traffic with WordPress (Coursera, Jul 2024); Build a Full Website Using WordPress (Coursera, Jul 2024)
